PRICE LIST No 25

J.B.PILKINGTON

NURSERYMAN Portland oregon

OFFICE AND CITY SALES YARD, 2ND & SALMON STS.

INFORMATION

This price-list No. 25 cancels all previous catalogs and governs all sales for the season fall 1925 and spring 1926.

Our business was established in 1887 and for the past 38 years we have been growers of general nursery stock, specializing in fine ornamental trees and shrubbery. We are practical horticulturists and glad to assist with advice concerning commercial fruit plantings as well as to assist in

improvement of home properties.

LOCATION—General office, packing and sales department are in Portland, corner Second and Salmon streets. Nurseries are at Durham, 11 miles south of the city. All inquiries should be addressed to the Portland office.

During planting season a general stock is carried at the city yards and replenished by daily truck service from the nursery. Visitors are welcome at all times to yards or

to nurseries for personal selection of specimen plants,

PLANTING SEASON-Stock should not be planted until dormant in the fall nor after growth starts in the spring. Under ordinary weather conditions digging and shipping season commences in mid-October and continues until early April. Early fall planting is preferable as a rule, as roots form during the mild winters and plants are ready to grow when warm weather begins. Early spring planting is also perfectly satisfactory.

PLACE YOUR ORDERS EARLY-Last season we were unable to fill all orders received, owing to adverse weather and the unprecedented demand, and early placed orders of course will be filled first. Owing to Federal Prohibition of importation of nursery stock, the supply in the entire United States is short and it will require several years growing before the American nurseries can take care of the normal demand.

PRICES AND DELIVERY—It is my aim and intention to give good value to all purchasers. Prices in this catalog are net for stock f. o. b. Portland or nursery shipping station. Unknown correspondents should send cash with their order

or arrange for terms.

GUARANTEE—I guarantee that all plants sent out will be delivered to the carrier in first-class condition and they shall be true to name and if through error any should prove untrue to replace them without charge. It is obvious that I cannot guarantee that customers will make them live, as I have no control over conditions surrounding them and the

care they will receive after they leave my hands.

LANDSCAPE DEPARTMENT—Best results are attained in landscape and other gardening work when both experience and taste work together. Our Landscape Department is under well equipped and expert management. We are always glad to offer suggestions without charge to intending purchasers, but where landscape problems require special visits, plans, specifications, etc., a charge is made consistent with value of services rendered. We will be pleased to take up this matter more fully with those who are interested.

NURSERY VIEW LAWSON CYPRESS EIGHT TO TWELVE FEET Erect Cypress 30 inches.. All frequently transplanted to make fibrous rot system, insuring safety in transplanting

DECIDUOUS ORNAMENTAL TREES

The following list of deciduous trees (those that lose their leaves in autumn) embraces a selecton for all purposes. For street planting, the Norway Maple probably leads in general suitability, with several other varieties of Maples, Elms, Birches, Horse Chestnuts, Tulips, Mountain Ash and others, all favorites; while for lawn and park planting this varied list covers trees of every characteristic in outline and habit,

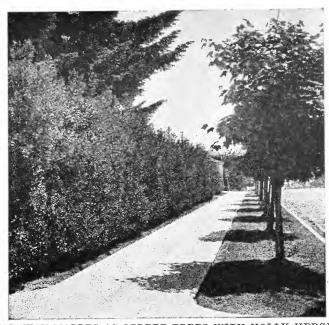

color of foliage and floral diversity.

These trees have been grown from seedlings in my nursery, have been transplanted each a number of times, according to size, will transplant readily and take vigorous hold and grow well when moved to permanent locations. Prices are for different sized trees, and in all cases good value will

be given, according to price charged.

As a street or curb tree, Norway Maple easily holds first choice. Park departments, city foresters and landscape architects unite in giving it first position, as it easily combines the greatest number of desirable qualities, it withstands extremes of drought and excessive moisture, does not lift or break sidewalks or curbs thriving in limited soil, of clean, upright and rather compact growth, not affected by city smoke or gases, and holding its foliage late, then dropping its leaves in a comparatively short space, making labor of cleaning up in the fall of little effort. For a small flowering tree for curb or in lawn Pauls Double Scarlet Hawthorne probably is first favorite.

MOUNTAIN ASH BERRIES

A HARMONIOUS SETTING-WHY NOT HAVE ONE EQUALLY GOOD?

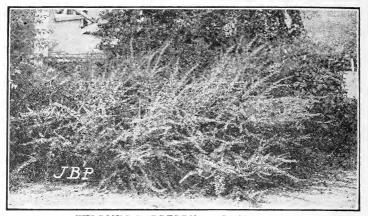

DECIDUOUS ORNAMENTAL SHRUBS

Flowering shrubs take predominance in all plans for landscape decoration, grounds large or small. Without shrubbery
no landscape can be created, but with a careful selection,
properly planted, any property can be enhanced in beauty
and value. If care is given in selecting, flowers can be had
from early Spring to late Fall. It is my aim to produce everything in flowering shrubbery that is useful, hardy, and worthy
of cultivation in this climate. I have been bringing in, trying
out and rejecting different shrubs for many years past, adding
to my list only those of proven merit in the Pacific Northwest. My stock is large, well grown, every plant oeing bushy
and well furnished in proportion to its height and with exceptionally fine root system. Where no sizes are quoted, prices
are for large, well grown shrubs, that will give immediate
effect and flower the first year after planting.

The Hydrangeas are among the most satisfactory shrubs, the Hydrangeas are among the most satisfactory strubs, the Hortensia type are very showy in late spring and early summer, thrive in shade or on north side of house. Hydrangea Paniculata graniflora "Peegee," either tree form or bush, flowers from mid-July until early fall, first creamy white and fades to deep pink. The Oak-Leaved flowers also, but is especially valuable for its rich autumnal foliage.

BASE PLANTING—RELIEVES AN OTHERWISE BLANK WALL Cotoneaster horizontalis bordering rear entrance steps, Spirea Thubergi, "first to flower in spring, last to lose its leaves in winter, against house, Boston Ivy on chimney

Spirea (Spiraea)-

The Spireas as a family are easily the first favorites in deciduous shrubs. Anthony Waterer is a dwarfish bushy plant of attractive foliage, flowering reddisn pink and fading to light pink, blooming over a long period in late spring and summer. Thunbergi (Japanese) is one of the first white flowers in early spring and one of the last to lose its foliage in December. Ideal for base planting and massing about the house, and Van Houtte's Bridal Wreath with its masses of drooping white flowers in May and June is probably the most extensively planted flowering shrub in America, thriving everywhere. Aitchisoni is very tall, with Mountain Ash like foliage and long spikes of creamy white flowers suitable for tall background and mass planting. Prunifolia Flore Pleno, the true Bridal Wreath is fine in flower and especially good for its rich autumn foliage.

ABELIA RUPESTRIS — BEAUTIFUL FLOWERING EVERGREEN

BROAD LEAVED EVERGREEN TREES AND SHRUBS

The great beauty of the broad leaved evergreens, makes them most valuable for gardening purposes. Many are among our most spectacular and gorgeous flowering shrubs, while their broad, attractive leaves show out most effectively during the parts of the year when many trees and plants are without foliage. There is practically no end to the charming results that can be obtained by the liberal use of this class of plants, either as single specimens or in masses as well as both background and foreground—for the somber winter picture or the summer floral display. They generally thrive in shady or partially shaded places, giving finest foliage effects when so grown—with better flowers perhaps when grown in the sun.

Our climatic conditions in the Pacific Northwest are particularly congenial to this class of shrubbery and aid in obtaining wonderfully pleasing effects in foliage and flowers. Our Oregon State Flower, Oregon Grape (Mahonia Aquifolium) and the state of Washington's choice of the native Rhododendron prove conclusively the esteem in which they are held. My stock of these is particularly fine, home grown, thoroughly acclimated, and good results can be depended upon.

As a family, they cannot be overestimated, furnishing variety of foliage and habit that makes them favorites in landscape planting. Not entirely evergreen, they are so persistent in foliage that they are commonly classed as such. All flower pinkish white in spring, but their main beauty is in the masses of red or orange red berries carried through fall and winter. Simonsi or Shing Leaf is upright, tall, orange red berries, fine for background. Franchetti is tall but graceful drooping habit, fine foliage, usually evergreen, with masses of berries. Horizontalis is very hardy, flat or creep-

EVERGREEN ENGLISH LAUREL

BASE PLANTING OF AZALEAS

Laurus (Prunus) Laurels and Laurustinus-

Well enough known in the Pacific Northwest to omit description. Large growing shrubs with glossy, evergreer foliage useful as specimens, in masses and for evergreer hedges. Laurustinus "Winter Flowering Laurel" blooms it late winter, large umbrels of pink and white flowers especially welcome at that season. The others are more valued for foliage than flowers.

PRUNING OF TREES AND SHRUBS

Deciduous trees and shrubs should be given a severe cutting-back or pruning when transplanted. More or less roots are always bruised and broken during transplanting, and al such should be trimmed off with pruning shears or a sharp knife, as the bark cannot heal over a rough wound. In order to insure a strong and healthy growth, as well as to cause the plant to become bushy or attain any desired shape, it is well to cut off from each branch one-third to one-half of the previous summer's growth. Fruit trees respond especially to free pruning at the time of transplanting.

The matter of when and how to prune establish shrubs and trees depends upon their habits and the purpose for which the operation is performed. Shrubs that bloom early in the spring form their flower-buds during the preceding summer, and they should, therefore, not be pruned until imme diately after flowering, if their flowering is to be preserved Late-blooming shrubs flower on wood of the same season's growth, and should be pruned while dormant, in late winter of very early spring. One-third the previous season's growth may be removed. Shrubs planted in masses should be pruned regularly to induce a dence growth, and to prevent individua plants from becoming too tall, with unsightly, open brances

The shearing or trimming of hedges should never be done later than July first, as late cutting allows a tender new growth, which does not have time to ripen properly and consequently is liable to winter-kill. The shearing of individual shrubs to form flat topped, globe, pyramidal, or other un natural-shaped specimens, should, as a general rule, be avoided.

NURSERY VIEW LAURELS AND NANDINA DOMESTICA "'HEAVENLY BAMBOO"

Ligustrum, Evergreen Privet—

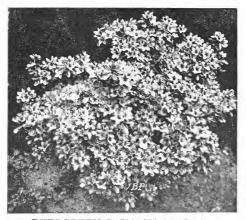

Lucidum or Shining Leaved Privet is one of the attractive evergreen shrubs, passed the December, 1924, freeze (7 below zero at the nurseries) with only minor injuries. Good size, upright spreading habit, exceptionally fine leathery, dark rich green foliage, miniature lilac-like flowers in June and followed by long upright racemes of dark purplish black berries carried entirely through the winter.

Magnolia Grandiflora, Evergreen-Out for season.

Nandina Domestica, Heavenly Bamboo.........12-18 1.00

A medium size shrub, open graceful habit, evergreen bright, light green foliage in summer, taking on high autumnal colors and fading back to green in spring, valuable for specimens and masses, and charming when intermingled as a foil or contrast with the heavier and more somber leaved

evergreens like Laurel, Oregon Grape or Rhododendron.

CONIFERS—EVERGREEN TREES

These are largely used as specimen lawn trees, in pairs to mark walks and entrances, for massing, windbreaks, screens, hedges and as backgrounds for planting flowering shrubs and trees, and of late years for foundation plantings around house or buildings especially at corners. Many associate the word "evergreens" with simply cedar or our native fir trees without realizing the diversity of color and form which can be had in these, ranging from every shade of green and blue foliage to garnet and yellow, golden, silver and white tipped, giving even summer tints to the desolate winter landscape.

Always dug with ball of earth and burlapped. We transplant and root prune them frequently, which practically insures successful transplanting, even of the larger specimens of which we have a limited number of large size specimens from 4 to 8 feet high in Abies, Cicilica, Concolor and Nordmanniana; Lawson's Cypress; White, Englemann's, Norway and Colorado Blue Spruces, and will gladly make special quo-

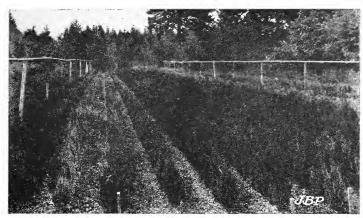

tation upon any in which you may be interested.

Abies (Firs)-

A class of rapid growing trees of extreme hardiness and thriving in exposed situations. They are of great decorative value but need plenty of space for their best development.

PRIVET HEDGE IN TACOMA. BEST OF HEDGE PLANTS

HEDGE PLANTS AND LIVE FENCES

The garden craftsman, if he is a true artist, will let Nature make his fences. Old dead walls and stiff fences are becoming obsolete among people of good taste. Anyone who has seen a rightly kept hedge of Privet, English Laurel, Oregon Grape, Holly or Roses, knows what an important feature it is in making truly beautiful grounds.

For medium-sized formal hedges the Privet is probably

the most satisfactory—a good grower, responds readily to the pruning knife; is the most economical in cost, perfectly hardy, and practically an evergreen with us. English Laurel and Lawson's Cypress are also fine for formal sheared hedges. For the high hedges, screens or windbreaks, Norway Spruce, Lawson Cypress and the Hemlock are all desirable; the Norway Spruce especially being sturdy, fast-growing and very handsome. These conifers are best pruned or sheared just as new growth starts in spring.

For the untrimmed hedges—those allowed to grow naturally with but little or no pruning, and which in many localities are now a favorite means of enclosing flower and vegetable gardens, edging terraces and defining roads and walks, covering unsightly defensive barb wire or picket fences—nearly any free-growing shrub can be used, such as Spireas, Van Houttes or Thunbergi, Oregon Grape, Abelia, English Laurel, Laurustinus, Cotoneasters and many others.

CHINESE TRUMPET VINE, WHITE JASMINE Both in full bloom when photographed Aug. 20. Boston Ivy on chimney

HARDY VINES AND CLIMBERS

The need of vines and creepers for home embellishment is well known, as nothing adds more grace and beauty to the exterior of the house than well-placed and appropriate vines. They cover porches and pergolas, give shade, comfort, perfume and flowers. A porch without a vine always appears desolate and incomplete. Also invaluable for converting offensive looking fences or other unsightly features into things of beauty. In shaded places and beneath old trees where grass will not grow they are often used as a ground cover. On steep slopes and banks they prevent erosion. Churches, depots, factories, outbuildings and all brick and stone edifices can be covered by clinging vines, without trellis work, that will relieve their harshness or lack of architectural beauty and make them things of beauty and joy forever.

Wistaria-	

Strong-growing, free-flowering climbers. They are hardy and ornamental, but require deep, rich soils and the occasional use of fertilizers, to obtain best results. When well established, a greater abundance of the lovely flowers can be had by rather severe pruning, cutting back the lateral shoots to short spurs and heading back the leaders conveniently, taking care, however, not to over-do it. The grafted Japanese varieties are strongly recommended as superior to the seculings.

The new Pink Wistaria was grafted with scions of a fine bright pink, long full panieles, from a notable Pasadena garden. We are propagating it locally and have strong thrifty plants for this season.

Wistaria-Multijuga, Japanese Wistaria, grafted purple	1.50
Multijuga Alba, White Japanese, grafted	1.50

The planting of trees and shrubbery is not an expense for they enhance real estate values, which makes their purchase a safe and sure investment.

PERENNIAL GARDEN

PERENNIALS AND HARDY FLOWERS

Beautiful, hardy plants, that will flower year after year without replanting each spring or fall, are growing into popular favor, and the so-called "old-fashioned garden" is to be

found everywhere.

The pleasures from a garden of such flowers planted by itself or especially when grouped in front of or among taller growing, hardy permanent shrubbery, cannot be fully described; caring for them is a change and relaxation. They require no skilled or heavy labor, and repay gloriously the attention bestowed upon them.

The following list covers plants that have proven satisfactory in the Northwest. My aim is to supply the best quality of strong, field-grown stock that will give immediate

quality of strong, field-grown stock that will give immediate

results.

Fall is the best time for planting Peonies, Japanese Lilies, Iris, etc., though they, and all perennials, can be planted any time until late spring, but best results are to be had from early planting.

ROSES

Strong Field Grown Two-Year-Old Plants That Give Results

Abbreviations used in descriptions are: H. P., Hybrid Perpetual—vigorous, hardy, flowering in Spring and Fall; require less care and attention than other classes. H. T., Hybrid Tea—more vigorous in growth, free flowering, fine colors; the most satisfactory class for the Pacific Northwest. colors; the most satisfactory class for the Pacific Northwest. T., Tea or Everblooming—less vigorous, more tender, finest of flowers. Poly., Polyanthus—fine class of small flowered climbers or pillar roses. Noi., Noisette—rather tender climbers, flowers usually in clusters. G. M., Gold Medal—the Highest Award of Merit given by the National Rose Society of England. Pert, Pernet—Ducher Austrian Briar Hybrids. These plants are too large for mailing unless severely cut back, though they can be sent this way if desired, in which case add 10 cents for single plants for postage; 30 cents for six. and 50 cents per dozen. We pack securely for

for six, and 50 cents per dozen. We pack securely for shipment by express anywhere without extra charge, purchaser paying express charges, which are very light on nursery stock

Brief Cultural Instructions

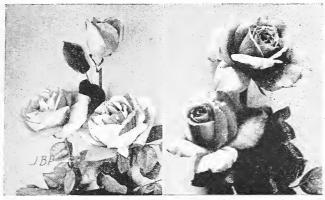

PLANTING .-- If the situation be not too much exposed where the Roses are to be set out, we prefer fall planting for all hardy kinds. Dormant plants set out in the spring should be planted early, for no plant suffers more from being set out late than the Rose. The plants should be put in friable, rich soil, and firmly pressed in with the foot, taking care not to bruise the roots. Budded roses should be planted sufficiently deep, so that the junction of the bud with the stock is from two to three inches below the surface of the earth. We cannot too forcibly direct attention to the above rule.

PRUNING.—This operation is best performed during ch. Most Roses do better if moderately pruned; some sorts require two-thirds of the past year's growth removed; for others to remove one-half or one-third is sufficient. All must be more or less pruned when planted; do not neglect this. As a general rule, the more vigorous the variety the less it should be pruned. All weak or decayed wood should be entirely cut out, and also any shoots that crowd the plant, and prevent free entrance of light and air. Besides spring pruning, many kinds Hybrid Perpetuals require to be pruned as soon as their first blooming is over, in order to induce a free display of flowers in autumn.

PROTECTION. All Roses would be better for a light covering. This may be done by hilling up with earth; or better, by strewing leaves or straw lightly over the plants and securing them with evergreen branches, oftentimes the latter are in themselves sufficient.

INSECTS.—If proper attention is paid to soil, planting, watering, etc., and a few simple directions heeded, you will not often be breatly troubled. The Aphis is among the most annoying foes, and particularly infests plants in houses; healthy plants in the garden are but little liable to its attacks. They can be exterminated by dusting the plants with tobacco dust while they are wet with dew, or by spraying with water in which tobacco stems or leaves have been steeped.

DISTANCE FOR PLANTING.—Distances apart for planting roses are regulated somewhat by the varieties used. Hybrid Perpetuals, Hybrid Teas and other strong growing kinds may be set three feet apart, and Teas from two to two and one-half feet apart. In planting several varieties in one bed, the stronger growing kinds should be placed in the center, or if in borders, they should be set back of the weaker growing kinds.

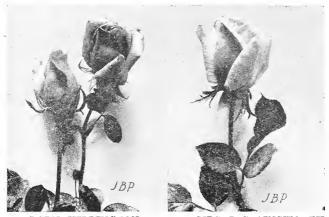

BETTY UPRICHARD

IMPERIAL POTENTATE

$Late\ Introductions-Novelties$

	Laci
Betty Uprichard, H. T., G. M., glowing carmine with orange copper at base of petals, upright growth, good form	1.50

IRISH YEWS

YAMHILL COUNTY PRUNE TREE IN BEARING

FRUITS

The list of Fruit Trees we offer is carefully selected, for commercial and Home Orchard planting. We aim to grow the best varieties of each species and have eliminated as far as possible the undesirable kinds, for we wish our patrons to feel sure that they can be sure of obtaining varieties of proven merit. We are growers of general nursery stock and not merely dealers. Our soil is a loam that produces an exceptionally good fibrous root system that insures success in transplanting. Grown right, handled properly, sold direct with no agent's commission. The planter gets the benefit.

BOOKS

We carry the following selected works for the convenience of our customers. Will cheerfully refund the price of any book that is not satisfactory if returned in good condition within one week.

The Amateur's Guide to Landscape Gardening
48-page booklet on general landscape design of benefit to any
home owner interested in improving and beautifying home
grounds. Mailed for 20 cents in stamps.

Practical Landscape Gardening Robert Cridland Are You Planning

to plant a few trees, shrubs, or hedge?

to construct a walk, drive, pergola or garden columns; a pretty garden seat or rustic house; fountain, lily pond, swimming pool or bird bath?

Do You Want to Know

-how deep and where to plant the trees, shrubs, porch base plants?
-which flowers to use in your garden and borders?
-how to construct your walks and drives, Summer house, arches and pools?
-how to attain this or that effect, and make your home surround-

to attain this or that effect, and make your home surroundings beautiful?

Then You Need This Book--Because:

It tells how to plant the 20 ft. plot, as well as the larger estate. It gives detailed sketches showing where to plant your flower garden, rose, wild or rock garden; lawns, borders, etc.

It has planting plans telling exactly what varieties to plant for best

effects.

effects.

It gives working plans showing how to construct walks, drives, pergolas, terraces, pools, fountains, garden seats and rustic houses, in fact every detail of your home surroundings.

It contains photographs of actual homes, showing the effect of different plantings, the correct and incorrect method, etc.

It will be the means of beautifying your home-grounds far beyond your own expectations.

Get this book. It will save you hundreds of dollars of needless expense and much time and thought, because it is written by a land-scape architect of national reputation, who tells facts that are worth money

worth money.
